

WHY BEES MATTER

1. POLLINATORS OF LIFE

Bees help pollinate wild plants and many food crops.

2. FOOD AND FARMS

Bees support fruits, vegetables, nuts, and seeds.

3. BIODIVERSITY

Bees help ecosystems stay diverse and resilient.

4. HABITAT HEALTH

Healthy bee populations are a sign of healthy land.

5. MORE THAN HONEYBEES

Native bees like bumble bees, mason bees, leafcutter bees, and sweat bees also matter.

When bees thrive, landscapes thrive.
